

## Contents

<b>1</b>	<b>Introduction</b>	1
1	Purpose of these notes . . . . .	1
<b>2</b>	<b>Maxima of finitely many variables</b>	3
1	Orlicz norms . . . . .	3
2	Subgaussian tails . . . . .	7
3	problems . . . . .	10
4	Notes      Need to be checked and expanded . . . . .	12
<b>3</b>	<b>Chaining methods</b>	15
1	Covering and packing numbers . . . . .	15
2	A first look at chaining . . . . .	17
3	Bounding sums by integrals . . . . .	20
4	A more useful chaining bound . . . . .	21
5	Chaining inequalities for norms . . . . .	26
6	Versions with continuous sample paths . . . . .	28
7	Some examples of chaining . . . . .	30
8	An extended statistical application . . . . .	32
<b>4</b>	<b>Symmetrization and conditioning</b>	37
1	Precursors . . . . .	37
2	Norm bounds via symmetrization . . . . .	42
3	Refinements of norm bounds . . . . .	44
4	Examples with norm bounds . . . . .	46
5	Tail bounds by symmetrization . . . . .	47
6	Massart's inequality . . . . .	48
7	Exponential bounds for small variances. . . . .	51
8	Conditional chaining . . . . .	57
9	Norm bounds via symmetrization . . . . .	61
10	Tail bounds by symmetrization . . . . .	63
11	Massart's inequality . . . . .	64
12	Exponential bounds for small variances. . . . .	67
<b>5</b>	<b>VC Sets</b>	75
1	An introductory example . . . . .	75
2	An important process . . . . .	78
3	Surround dimension . . . . .	80
4	A combinatorial inequality . . . . .	84

5	Packing numbers via surround dimension . . . . .	87
6	An improvement of the packing bound . . . . .	89
<b>6</b>	<b>VC functions</b>	<b>99</b>
1	An important process . . . . .	99
2	Fat shattering . . . . .	101
<b>8</b>	<b>Concentration inequalities</b>	<b>113</b>
1	Introduction to concentration . . . . .	113
2	Preview . . . . .	115
3	Concentration inequalities for normals . . . . .	117
4	Tensorization . . . . .	120
5	Concentration for empirical processes . . . . .	125
<b>9</b>	<b>Concentration: Talagrand's method</b>	<b>131</b>
1	Introduction . . . . .	131
2	Control by a single point: introduction to the inductive method	135
3	Talagrand's convex hull theorem . . . . .	138
4	Multi-point control [unedited] . . . . .	142
<b>10</b>	<b>Majorizing measures</b>	<b>151</b>
1	Introduction . . . . .	151
2	Two informative examples . . . . .	153
3	Reduction to a compact or finite set . . . . .	156
4	Method of Kwapień and Rosiński . . . . .	156
5	Rewrite of Bednorz . . . . .	156
6	Bednorz's method for bounded sample paths . . . . .	160
7	Bednorz's method for continuous sample paths [incomplete]	164
8	Bounding sums by integrals . . . . .	166
9	Problems . . . . .	166
<b>11</b>	<b>Bracketing methods</b>	<b>169</b>
1	What is bracketing? . . . . .	169
2	Independent summands . . . . .	175
3	A generic bracketing bound . . . . .	182
4	Phi mixing . . . . .	187
5	Absolute regularity . . . . .	191
6	Strong mixing . . . . .	193
7	Tail probability bounds . . . . .	194
